McAfee Endpoint Protection

Why Use Endpoint Protection?

Endpoint security is critical for securing devices on your network: desktops, laptops, file and email servers. By making each individual element secure with virus, spyware, spam, web security, phishing and desktop firewall protection the entire network stays protected. McAfee Endpoint Protection offers constant threat detection and defense as well as reporting and automatic updates.

Improve efficiency with protection across devices Enhance efficiency with a security solution that works for all of your devices. Endpoint Protection provides continuous security against multiple threats across all of your devices. Let us focus on your security, so that you can focus on your business.

Reduce cost with a single source for all security Reduce your software licensing costs and management hardware investment. There's no need to buy additional security management software, hardware or technical support. McAfee Endpoint Protection from CenturyLink automates security and frees up your IT staff.
